MULTI-BLOCK

MULTI-BLOCK™

Legro's family of MULTI-BLOCK™ dispensers handle paper, foil and ribbon. Legro has won a number of design awards for our products. We set the highest standards of safety and user-friendliness and own various patents incorporating the click system, which safely accommodates two different knife units for different cutting and tearing applications.

An extensive range of add-on accessories enhances the versatility of the basic, modular unit.

For example, the dispenser can be mounted on a wall, either on the top or beneath the workbench. All models can be integrated with Legro's Mini Packing Tables to suit all packing areas. MULTI-BLOCK™ dispensers are designed to accommodate all standard diameters of paper and foil rolls, and widths from 30cm to 110cm inclusive.

A Single Basic Unit with Four Options

The basic framework of the MULTI-BLOCK™ paper and foil dispenser can accommodate any combination of one to three rolls of all standard widths and diameters.

The uniqueness of the modular MULTI-BLOCK™ lies in the arrangement of the axle bearings, radial mounting bracket and knife with our click mechanism. The graduated feature of the axle bearings ensures that the paper or film is kept pressed evenly to the blade unit as the roll reduces in diameter. This results in a consistently optimum cutting and tear-off edge
